1 Introduction

1.1 Document purpose

The “User Requirements Document” provides a comprehensive description of the 4Team project's requirements from the user's perspective. It outlines the key functionalities available to different user roles, including conversation management, search and filtering options, and profile operations for standard users, as well as group management capabilities for group admins.

This document ensures that the user's interactions and expectations within the web application are clearly defined to guide the development process.

1.2 Short project description

The 4Team project is an online chat application designed to facilitate real-time communication for users. It allows standard users to manage their conversations, search, filter, and customize their profile, while group admins have additional capabilities such as managing group members, promoting or blocking users, and controlling group activities. The application aims to provide a seamless, intuitive interface, offering a secure and efficient messaging experience for both personal and group interactions.

1.3 Definitions and abbreviations

- *Standard User* – A user with access to basic application functionalities, such as viewing conversations, searching and deleting conversations, filtering options, and managing their profile;
- *Group Admin* – A user with extended permissions, allowing them to manage groups, promote or temporarily block users, and temporarily halt group activities.

2 General description

This application is an online chat platform built to allow users to communicate in real time, both through text messages and multimedia file sharing. The application is designed to serve two main types of users: standard users and group administrators . These categories will have access to functionality tailored to their roles, with the ability to view, search, filter, and manage conversations or users within groups.

2.1 Project context

The project develops in the context of a requirement to facilitate online communication in an efficient and intuitive way. The application aims to provide a modern instant messaging platform, inspired by the main features of the WhatsApp platform, allowing users to communicate both in private conversations and in groups. The app will include features for quick search in conversations, group management and user profile management, while ensuring security and privacy of information.

2.2 General capabilities

The application provides the following general capabilities:

- Instant Messaging: Users can send and receive text messages in real time.
- Conversation Viewing: Users can access past conversation history
- Conversation Search: The ability to search for keywords in conversations to find specific messages.
- Conversation filtering: Users can filter conversations based on conversation type (private or group), status (read, unread, archived)
- Delete conversations: Users can delete one or more conversations as needed.
- Administration of groups: Group administrators can manage group members, promote users to the rank of administrators, delete users from the group or temporarily block users.

2.3 User characteristics

Standard user

A standard user has access to the following features:

- 1.Conversation Viewing: Users can access and view all conversations in their history.
2. Search and filter: The ability to search for specific messages and filter conversations based on predefined criteria (eg the type of conversation or its status).

3.Deleting Conversations: Users can delete an entire conversation or individual messages from it.

4.Personal Profile: Each user has their own profile where they can view and edit personal information such as display name, status, and profile picture.

Group admin

Group administrators inherit all the features of standard users and additionally have the following functionality:

1.Administration of group users: Administrators can promote members to administrator roles, delete users from the group or temporarily block their access.

2.Suspension of group activities: Admins can temporarily pause group activity, blocking messaging or interaction within the group for a period of time.

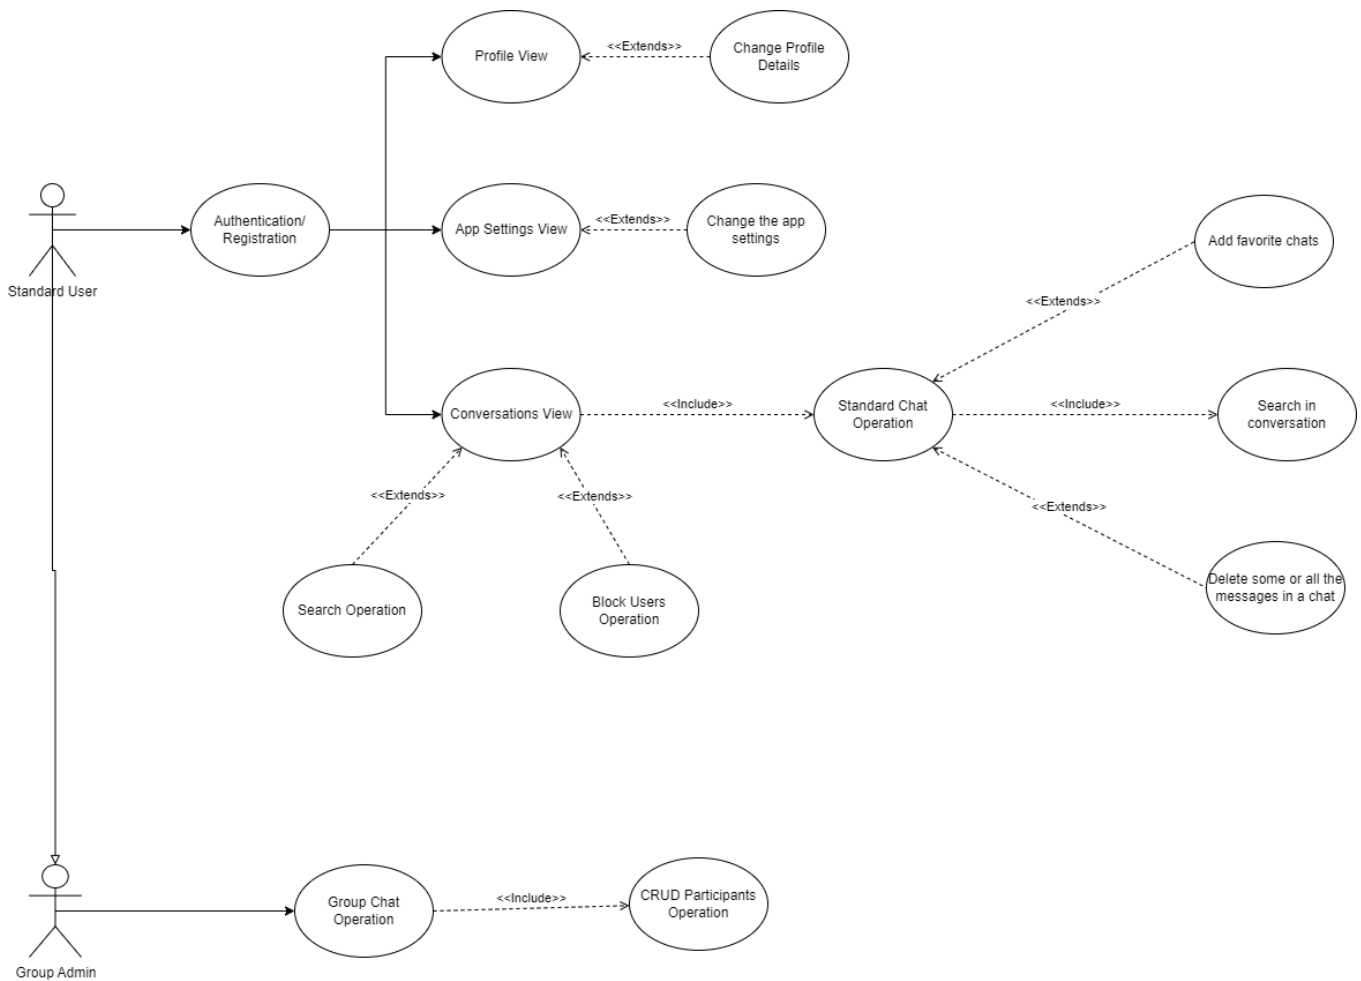

3.Advanced group settings: Ability to customize group settings, such as group description, group profile picture, and internal rules of conduct.

3 Use cases

3.1 Actors

- *Standard User*
- Group admin

3.2 Use case UML diagram

4 Specific requirements

- Standard users and group admins must authenticate before accessing all features of our app.

Nr.	As... (role)	I want to...(characteristic)	To be able to...(reason)	Priority/Necessity
1.	Standard User	View conversations	Talk to the people he/she previously started a chat with	Maximum
2.	Standard User	Have different types of chats (1 to 1 and group)	Communicate to different people in different forms, depending on the needs	Maximum
3.	Standard User	Perform a search operation	Search with the ability to apply filters for specific conversations, messages, and users	Maximum
4.	Standard User	Access conversation features	Edit the chat's name and view participant profiles	Maximum
5.	Standard User	Change the profile details	Ensure user's information is accurate and up-to-date	Medium
6.	Standard User	Change the profile settings	Customize user experience and preferences within the app	Medium
7.	Standard User	Send friend requests to other users	Manage the contacts and conversations and seek out connections	Medium
8.	Standard User	Add favorite chats	Quickly access important conversations without searching	Medium
9.	Standard User	Search in conversation	Find specific information residing in the conversation	Medium (Optional)
10.	Standard User	Delete some or all of the messages in a chat	Only see the messages that are deemed more important or more valuable	Medium (Optional)
11.	Standard User	Change the profile status	Express the feelings and ideas that I have at a certain point in time	Medium (Optional)
12.	Standard	Temporary block other	Have a way of limiting interactions with someone I may	Medium

	User	users in a private chat	not want to engage with at that moment	
13.	Group Admin	Inherit the permissions of a standard user on conversations	Perform all basic conversation features	Maximum
14.	Group Admin	Add users	Expand the group or conversation by including new participants	Maximum
15.	Group Admin	Delete users	Remove inactive or obsolete accounts, ensuring a cleaner and more manageable user base	Maximum
16.	Group Admin	Temporary block users	Maintain a sense of stability, address instances of harassment, spamming, or other disruptive behavior within the platform	Medium
17.	Group Admin	Temporary stop group activities	Mitigate risks from users who pose a security threat, such as potential data breaches or malicious activities	Medium
18.	Group Admin	Promote other users to the admin role	Give other users permission to promote others to admin status too, update the group chat information, remove or add people from the group	Medium

5 Conclusions

In conclusion, the “User Requirements Document” for the 4Team project serves as a foundational guide for the development of a robust online chat application. By clearly delineating user roles and their respective functionalities, this document addresses the diverse needs of both standard users and group administrators. The emphasis on intuitive design and efficient communication tools ensures that users can manage their conversations effectively while maintaining control over group dynamics.

This comprehensive overview not only sets the stage for a seamless user experience but also highlights the importance of security and privacy in online communication. The requirements outlined herein will guide the development process, ensuring that the final product meets user expectations and enhances their interaction with the platform. As the project moves forward, adhering to these requirements will be crucial in delivering a chat application that is both user-friendly and feature-rich, fostering a vibrant and secure community for all users.
