PROFESSIONAL EXPERIENCE ~ 10 MONTHS

AMD, Iasi Romania, Software Engineer Intern

1 Jun '24 - 30 Sep 24'

- **Situation:** The team was experiencing low productivity due to a manual workflow that handled thousands of regressions via crontab across several Linux servers.
- **Task:** I was tasked with improving this ineffective process to enhance both efficiency and reliability.
- **Action:** I developed a microservices-based web application that included action tracking, Git-like versioning for regressions and a state machine for consistent database synchronization. The state machine ensured precise detection of changes, whether made through the UI or directly on the crontab server.
- **Result:** The new application significantly improved team productivity and streamlined regression management.

Continental, Iasi Romania, DevOps Engineer Intern

15 Jul 23' – 9 Feb 24'

- **Situation:** With the rising demands for CI build efficiency, I realized it was essential to gather the team to address the challenges we encountered in effectively managing our resources.
- **Task:** Once I shared my ideas with the team, it became clear that my goal was to boost CI build efficiency by developing a more centralized and effective system for managing our CI process resources.
- **Action:** I proactively developed a Jenkins Shared Library, which involved comprehensive refactoring of various scripts alongside the implementation of new logic. This refactoring adhered to strict OOP principles and utilized a state machine for intelligent resource selection and management.
- **Result:** As a result of my efforts, I achieved significant enhancements in CI build efficiency, optimized resource management and ensured seamless integration with various cloud providers.

SKILLS - ENGLISH (ADVANCED) ROMANIAN (NATIVE)

- **Software Engineering:** System/Software/Algorithm Design, OOP, UML, Data Structures, Analytical Thinking, Problem Solving
- **Development Tools:** Ktor, Spring, ASP.NET, Flask, React
- **Operations Tools:** Docker, Linux, Jenkins, Kubernetes/Swarm, Git
- **Messaging Brokers:** Kafka, RabbitMQ
- **Programming Languages:** Kotlin, Python, Java, C#, JavaScript, Bash
- **Cloud:** AWS (API Gateway, Lambda, EC2, CodeCommit, CloudTrail)

PERSONAL PROJECTS - PUBLIC ON GITHUB

- 🔗 Online Book Shop: clean architecture, clean code, layered monolith, teamwork Apr 24' - Jun 24'
- 🔗 Share Drive CLI: component-based architecture, client-server, Coap RFC Nov 23' - Jan 24'
- 🔗 Nvidia GPU Manager: bash scripting, topic-based research Oct 23' - Oct 23'
- 🔗 Cyberpunk Platformer: fine-grained granularity, complex oop design Mar 23' - May 23'

EDUCATION + AWARDS

- Gheorghe Asachi University, Iasi Romania bachelor's in computer engineering and automatic control Graduation year 2025
- Amazon Learn&Earn: OOP
- Amazon Learn&Earn: Data Structures
